

Growing Beans

A kidcyber book

by Shirley Sydenham & Ron Thomas

I planted some beans in egg shells.

They began to grow.

This is how the bean seeds grow inside the soil.

When they got bigger I planted the bean plants in the garden.
They began to grow even more.

I watered my little plants.
The water helped them grow.

The sun helped them grow too.

The bean plants grew big.
I had to tie them to sticks so they wouldn't fall over.

I wonder how tall my beans will grow?

Flowers grew on the bean plants.
Bees and butterflies visited the flowers.

After the flowers had gone, pods began to grow.
I picked the pods when they were big.

I opened the pods. There were beans inside the pods.
They looked just like the beans I planted!

Mum cooked the beans and they were yummy.

I kept some beans to plant and grow more beans.

I love growing vegetables!
